

Mapping With Melanin™ - All Outstanding Issues

THE CORE PRINCIPLE

"Whatever I can do on my iPhone, I can do on the web. The experience should not just FEEL the same — it should BE the same. The web is more central for many users. A woman who makes clothes by hand and whose sewing machine broke should be able to ask her community for help. Where would she even ask? We want to connect people in ways they never would have connected before. The website is NOT a marketing page — it IS the product."

Issue Summary

Priority	Description	Total Issues
P0	Tour-Blocking (Must fix before Aug 15)	10
P1	Critical UX (Must fix for testers)	15
P2	Important (Should fix before tour)	14
P3	Polish (Fix when possible)	6
Total		45

P0 — TOUR-BLOCKING (Must fix before Aug 15)

API / Backend

☐ **Issue 1 (P0):** City launch triggers NOT FIRED

- **Platform:** API / Backend
- **Current behavior:** All 16 tour cities are still "staged" (invisible to users).
- **Expected behavior:** All 16 tour cities should be actively fired and visible to users immediately.

☐ **Issue 2 (P0):** Cultural sites endpoint times out

- **Platform:** API / Backend
- **Current behavior:** Endpoint times out because it attempts to load all 2,220 records at once without pagination.
- **Expected behavior:** Endpoint implements pagination to load cultural sites efficiently without timing out.

☐ **Issue 3 (P0):** Sessions being destroyed

- **Platform:** API / Backend / All
- **Current behavior:** User logs in, sees the app briefly, then gets kicked back to the login screen.
- **Expected behavior:** User session persists reliably after login without unexpected logouts.

Cross-Platform

☐ **Issue 4 (P0):** Stale bundle issue

- **Platform:** Cross-Platform (Deployment Pipeline)
- **Current behavior:** Railway serves old code after deployment.
- **Expected behavior:** A permanently fixed, one-command build-and-ship process ensures Railway always serves the latest code.

☐ **Issue 5 (P0):** Demo businesses showing to real users

- **Platform:** Cross-Platform (Data)
- **Current behavior:** Demo businesses (e.g., with fake 555 phone numbers, fake websites) appear to real users without being clearly marked.
- **Expected behavior:** All demo businesses are either removed or explicitly marked as "TEST BUSINESS".

☐ **Issue 6 (P0):** Specific demo businesses featured as real

- **Platform:** Cross-Platform (Data)
- **Current behavior:** "The Gathering Table," "Heritage Boutique Hotel," and "Diaspora Arts Collective" are featured on the businesses page as real entities.
- **Expected behavior:** These demo/fake businesses are removed from featured sections or marked clearly.

☐ **Issue 7 (P0):** "Bull City Creamery" data verification

- **Platform:** Cross-Platform (Data)

- **Current behavior:** Business shows fake phone (919) 555-6101 and fake website.
- **Expected behavior:** Business is clearly marked as demo, or updated with real information if it is a real business.

☐ **Issue 8 (P0):** Audit ALL businesses for fake data

- **Platform:** Cross-Platform (Data)
- **Current behavior:** Unaudited mix of real and fake data (555 numbers, fake websites) exists in the database.
- **Expected behavior:** Database is fully audited; all fake data is removed or clearly marked.

Mobile

☐ **Issue 9 (P0):** Sign in with Apple errors on iPad

- **Platform:** Mobile (iPad)
- **Current behavior:** Apple rejected Build 102 because Sign in with Apple errors out on iPad.
- **Expected behavior:** Sign in with Apple works flawlessly on iPad.

☐ **Issue 10 (P0):** Sign in with email errors

- **Platform:** Mobile
 - **Current behavior:** Apple rejected the build because email sign-in produces errors.
 - **Expected behavior:** Email sign-in works flawlessly.
-

P1 — CRITICAL UX (Must fix for testers)

Web

☐ **Issue 11 (P1):** Map shows ALL of North America zoomed out

- **Platform:** Web
- **Current behavior:** Map defaults to a zoomed-out view of North America.
- **Expected behavior:** Map centers on the user's location or home city by default.

☐ **Issue 12 (P1):** Website doesn't ask for location permission

- **Platform:** Web
- **Current behavior:** No location permission prompt exists.

- **Expected behavior:** Website prompts for location permission or defaults to user's home city.

☐ **Issue 13 (P1):** Sidebar listing click does NOT center map

- **Platform:** Web
- **Current behavior:** Clicking a listing in the sidebar does nothing to the map (static list).
- **Expected behavior:** Clicking a listing in the sidebar centers the map on that specific pin.

☐ **Issue 14 (P1):** NO community page on the website

- **Platform:** Web
- **Current behavior:** Users cannot see community discussions.
- **Expected behavior:** A fully functional community page exists on the website.

☐ **Issue 15 (P1):** NO safety report submission on the website

- **Platform:** Web
- **Current behavior:** Users cannot submit safety reports via the web.
- **Expected behavior:** Users can easily submit safety reports on the website.

☐ **Issue 16 (P1):** NO marketplace on the website

- **Platform:** Web
- **Current behavior:** The marketplace feature is missing entirely.
- **Expected behavior:** A fully functional marketplace exists on the website.

☐ **Issue 17 (P1):** Ownership filter toggles are STATIC

- **Platform:** Web
- **Current behavior:** Clicking "Women-Owned" or "Minority-Owned" does nothing.
- **Expected behavior:** Toggles dynamically filter the displayed results.

☐ **Issue 18 (P1):** Category filters don't work

- **Platform:** Web
- **Current behavior:** Clicking category filters (Restaurants, Hotels, etc.) does not filter results.
- **Expected behavior:** Category filters dynamically update the displayed results.

☐ **Issue 19 (P1):** "Black-Owned" highlighted in red (regression)

- **Platform:** Web

- **Current behavior:** "Black-Owned" is highlighted in red as the first/default filter on the Businesses page.
- **Expected behavior:** Language audit is respected; styling matches the approved design system without inappropriate highlighting.

☐ **Issue 20 (P1):** Profile name input is INVISIBLE

- **Platform:** Web
- **Current behavior:** White text on a cream background makes typing invisible.
- **Expected behavior:** Text input has proper contrast (e.g., dark text) so users can see what they type.

☐ **Issue 21 (P1):** Profile data appears blank

- **Platform:** Web
- **Current behavior:** First name, last name, and badges all appear empty.
- **Expected behavior:** User profile data populates correctly from the database.

☐ **Issue 22 (P1):** Admin dashboard crashes

- **Platform:** Web
- **Current behavior:** Admin dashboard crashes with React error #310.
- **Expected behavior:** Admin dashboard loads and functions without crashing.

Cross-Platform

☐ **Issue 23 (P1):** Pins without precise lat/lng are invisible

- **Platform:** Cross-Platform (Map)
- **Current behavior:** Locations lacking precise coordinates do not appear on the map.
- **Expected behavior:** Pins without precise lat/lng use the city center as a fallback and remain visible.

☐ **Issue 24 (P1):** Searching "Philadelphia" on Explore returns 0 results

- **Platform:** Cross-Platform (Search)
- **Current behavior:** Search returns "0 results - filtered".
- **Expected behavior:** Search returns all relevant listings for Philadelphia.

☐ **Issue 25 (P1):** Map page search shows 0 locations

- **Platform:** Cross-Platform (Search)
- **Current behavior:** Searching on the Map page shows "0 locations" / "No businesses match your filters".

- **Expected behavior:** Map search correctly filters and displays relevant locations.
-

P2 — IMPORTANT (Should fix before tour)

Web

- ☐ **Issue 26 (P2):** No ability to leave reviews on web
 - **Platform:** Web
 - **Current behavior:** Users can only "add a comment".
 - **Expected behavior:** Users can leave full reviews on the web, matching the mobile experience.
- ☐ **Issue 27 (P2):** No ability to endorse/tag businesses on web
 - **Platform:** Web
 - **Current behavior:** "What stands out?" tags are missing.
 - **Expected behavior:** Users can endorse and tag businesses on the web.
- ☐ **Issue 28 (P2):** No community feed on web
 - **Platform:** Web
 - **Current behavior:** Community feed is missing.
 - **Expected behavior:** Community feed is fully implemented on the web.
- ☐ **Issue 29 (P2):** No events page on web
 - **Platform:** Web
 - **Current behavior:** Events page is missing.
 - **Expected behavior:** Events page is fully implemented on the web.
- ☐ **Issue 30 (P2):** No circles/groups on web
 - **Platform:** Web
 - **Current behavior:** Circles/groups functionality is missing.
 - **Expected behavior:** Circles/groups functionality is fully implemented on the web.
- ☐ **Issue 31 (P2):** No "Community" page in web navigation
 - **Platform:** Web
 - **Current behavior:** Navigation lacks a link to the Community page.
 - **Expected behavior:** "Community" is prominently featured in web navigation.

- ☐ **Issue 32 (P2):** No "Safety" reporting accessible from web
 - **Platform:** Web
 - **Current behavior:** Navigation lacks access to Safety reporting.
 - **Expected behavior:** "Safety" reporting is easily accessible from web navigation.
- ☐ **Issue 33 (P2):** No "Marketplace" accessible from web
 - **Platform:** Web
 - **Current behavior:** Navigation lacks access to the Marketplace.
 - **Expected behavior:** "Marketplace" is easily accessible from web navigation.
- ☐ **Issue 34 (P2):** Web feels like a marketing page
 - **Platform:** Web
 - **Current behavior:** The website lacks core product functionality, feeling like a landing page.
 - **Expected behavior:** The website functions as the full product, with complete feature parity to the mobile app.

Cross-Platform

- ☐ **Issue 35 (P2):** Featured businesses are demo data
 - **Platform:** Cross-Platform (Data)
 - **Current behavior:** Featured businesses on the Businesses page use demo data.
 - **Expected behavior:** Featured businesses show REAL businesses from seeded data.
 - ☐ **Issue 36 (P2):** All 6 businesses shown are demo
 - **Platform:** Cross-Platform (Data)
 - **Current behavior:** Only demo businesses appear; the 2,220 real cultural sites and 497 real businesses are missing.
 - **Expected behavior:** Real seeded data (cultural sites and businesses) populates the application.
 - ☐ **Issue 37 (P2):** The same 6 demo results show for every city
 - **Platform:** Cross-Platform (Data)
 - **Current behavior:** Searching any city returns the exact same 6 demo businesses.
 - **Expected behavior:** Search results accurately reflect the businesses located in the searched city.
-

P3 — POLISH (Fix when possible)

API / Backend

- ☐ **Issue 38 (P3):** DB pool is only 2 connections
 - **Platform:** API / Backend
 - **Current behavior:** DB pool is set to 2 connections, which is too small for tour traffic.
 - **Expected behavior:** DB pool is bumped to 5-10 connections.
- ☐ **Issue 39 (P3):** /api/cities returns 500 error
 - **Platform:** API / Backend
 - **Current behavior:** Endpoint returns a 500 internal server error.
 - **Expected behavior:** Endpoint returns a 200 OK with the correct list of cities.
- ☐ **Issue 40 (P3):** /api/city-launches public route doesn't exist
 - **Platform:** API / Backend
 - **Current behavior:** Endpoint returns a 404 error.
 - **Expected behavior:** Public route exists and returns appropriate city launch data.
- ☐ **Issue 41 (P3):** Auth response body says {"user":null}
 - **Platform:** API / Backend
 - **Current behavior:** Failed auth returns {"user":null} .
 - **Expected behavior:** Failed auth returns {"error":"Unauthorized"} .

Web

- ☐ **Issue 42 (P3):** "Near Me" button functionality unclear
 - **Platform:** Web
 - **Current behavior:** Unclear if the "Near Me" button on the Businesses page actually works.
 - **Expected behavior:** "Near Me" button successfully requests location and filters businesses by proximity.
- ☐ **Issue 43 (P3):** KinfolkAI chat bubble functionality unclear
 - **Platform:** Web
 - **Current behavior:** Chat bubble appears everywhere, but functionality on web is unverified.

- **Expected behavior:** KinfolkAI chat bubble is fully functional on the web, or removed if not supported.
-

VERIFICATION PROTOCOL

To ensure issues are not just marked "done" but actually fixed in production, the founder will use the following verification steps for each category:

1. API / Backend Verification:

- Direct endpoint testing using Postman or browser network tools to confirm 200 status codes, correct payloads (e.g., `{"error": "Unauthorized"}`), and pagination implementation.
- DB connection pool verification via Railway dashboard metrics during load testing.

2. Cross-Platform / Data Verification:

- Manual search for known demo businesses ("The Gathering Table", "Bull City Creamery") in production; they must not appear or must be marked "TEST BUSINESS".
- Search specific cities (e.g., Philadelphia, Atlanta) to confirm distinct, real data populates.
- Verify Railway deployments by checking the specific commit hash against the live production behavior.

3. Web Feature Parity Verification:

- Side-by-side comparison: Founder will open the iOS app and the Web app simultaneously. Every action taken on iOS (leaving a review, endorsing, posting to community, submitting a safety report) MUST be executable on the Web app.
- Filter testing: Click every filter toggle and category on the web to ensure the displayed list updates dynamically.

4. Mobile Auth Verification:

- Test flight download on iPad: Execute "Sign in with Apple" and confirm successful login.
- Test flight download on iPhone: Execute email sign-in and confirm successful login.
- Session persistence: Log in, close the app, reopen after 5 minutes, and confirm the session is still active.
