

Pin Demo Request — Show Me What Users Will See

Status: IMMEDIATE (Before Build 103 ships)

What I Need

I want to SEE the pin experience in the actual app — not code, not a database query, not a screenshot of JSON. I want to open the app (TestFlight or web preview) and experience what a real user will experience when they tap different types of pins.

Create a demo walkthrough showing me the following pin types from our seeded data:

Demo Pins to Show (6 types)

1. Cultural Site Pin

Example: The African American Museum in Philadelphia (AAMP) or Mother Bethel AME Church

- How does the pin look on the map? (Icon, color, size)
- When I tap it, what card appears?
- Does it show the description from our guide?
- Does it show the visit_tip? ("Sunday mornings are when this community comes alive...")
- Does it show the "Community Listed — This business has not yet claimed its profile" banner?
- Is there a "Learn More" or external URL link?

2. Business Pin (Restaurant)

Example: Any diaspora-owned restaurant from our guides (e.g., an Ethiopian restaurant, a Caribbean spot, or a soul food place)

- How does the pin look vs. a cultural site? (Different icon/color?)
- When I tap it, do I see the 4-layer card hierarchy?
 - Layer 1: Business story (description from our guide until owner claims)

- Layer 2: Community voice (endorsement tags area — even if empty, show the placeholder)
- Layer 3: Cultural Ambassador content area
- Layer 4: External link (website/social media)
- Does it show the culturalCommunity tag? (e.g., "Ethiopian-owned" or "Caribbean-owned")
- Does it show the visit_tip?

3. Heritage District Pin

Example: Sweet Auburn (Atlanta), Tremé (New Orleans), or Jackson Ward (Richmond)

- How does a DISTRICT pin differ from a single-location pin?
- Is it a larger area indicator or a single point?
- When I tap it, does it show the historical context?
- Does it link to other pins WITHIN that district?

4. Farmers Market Pin

Example: Crescent City Farmers Market (New Orleans) or any market from our guides

- Does it show seasonal/timing info?
- Does the visit_tip say something like "Saturday mornings are the heartbeat — get there by 9am"?
- Does it indicate if it's a recurring event vs. a permanent location?

5. HBCU Pin

Example: Howard University (DC), Morehouse (Atlanta), or any HBCU from our guides

- How does an HBCU pin look on the map?
- Does the card show the historical significance?
- Does it link to the external URL?

6. Mural / Public Art Pin

Example: Any mural or public art installation from our guides

- How does this pin type look? (Different from a business or cultural site?)
- Does it show location context? (Intersection or neighborhood)
- Is there a photo placeholder for when we add images later?

What I'm Evaluating

1. **Visual Distinction** — Can I tell at a glance what TYPE of pin I'm looking at? (Different colors, icons, or sizes for cultural sites vs. businesses vs. districts vs. markets)
 2. **Information Richness** — When I tap a pin, does it feel alive? Description, visit_tip, cultural community tag, endorsement area, external link — all present?
 3. **The "Unclaimed" Experience** — For pins that haven't been claimed by an owner, does the app still feel rich and informative? (Our guide descriptions should make it feel like someone curated this, not like it's an empty placeholder)
 4. **Cultural Specificity** — Does an Ethiopian restaurant pin FEEL different from a generic restaurant pin? Does a civil rights landmark FEEL different from a random park?
 5. **The Living Legacy Connection** — Can I get from a cultural site pin to the city's Living Legacy page?
-

How to Show Me

Option A (Preferred): Record a short screen recording (1-2 minutes) walking through all 6 pin types in the app. Tap each one, show the card, scroll through the content.

Option B: Deploy a web preview I can access directly and tell me which city to look at and which pins to tap.

Option C: If neither A nor B is possible right now, provide annotated screenshots of each pin type showing exactly what the user sees.

If Any of These Don't Exist Yet

Tell me honestly which pin types are NOT yet visually distinguished in the app. If all pins currently look the same (same icon, same color), I need to know that NOW so we can fix it before the tour. The map should feel like a living, breathing cultural guide — not a sea of identical dots.

Timeline

I need to see this BEFORE Build 103 ships. This is a visual/UX review, not a feature request. Show me what exists today so I can give feedback before we push to users.
