

Task #101 Authorization — Pin Experience End-to-End

Status: AUTHORIZED — #1 PRIORITY FOR BUILD 103

Deadline: August 10-11, 2026 (Tour starts Aug 15)

Why This Is #1 Priority

The pin experience is the FIRST thing tour attendees will interact with. When someone scans the QR code, downloads the app, and opens the map — they tap a pin. If that pin shows nothing meaningful, the app feels empty and dead. It doesn't matter that we have 2,220 sites with rich data in Postgres if none of it reaches the screen.

This is the difference between "wow, this app knows my city" and "this is just another map with dots."

What Must Ship in Build 103 (Non-Negotiable)

1. Drizzle Schema — Add 5 Missing Columns

The following columns exist in Railway Postgres but are NOT in the Drizzle schema, meaning the API can't return them:

- `visit_tip` (text)
- `content_note` (text)
- `pin_type` (text)
- `listing_status` (text — live_unclaimed, live_claimed, staged, demo)
- `ethnic_community` / `culturalCommunity` (text)

Add them to the Drizzle schema so the API can read and return them.

2. API — Return Rich Data on Pin Tap

When a user taps a pin, the API response must include:

- `name`
- `description` (the full description from our guides — NOT just a category label)

- `visit_tip` (Kinfolk-voiced cultural context)
- `pin_type` (cultural_site, business, market, heritage_district, HBCU, mural_or_public_art, etc.)
- `culturalCommunity` (Ethiopian-owned, Caribbean-owned, Hispanic-owned, etc.)
- `listing_status` (so the UI knows whether to show "unclaimed" banner)
- `address`
- `externalUrl` (if available)
- `category`
- All existing fields (rating, verified, etc.)

3. Mobile Card — Show the Data

When a user taps a pin on mobile, the bottom sheet / card must show:

For ALL pin types:

- Name (large, prominent)
- Description (the full paragraph from our guide — scrollable if long)
- Visit_tip (styled differently — warm, italicized, or in a callout box)
- Cultural community chip/badge (e.g., "Ethiopian-owned" or "Caribbean-owned")
- Pin type indicator (icon + label: "Cultural Site" / "Heritage Landmark" / "Farmers Market")
- External URL button ("Learn More" or "Visit Website") if available

For unclaimed businesses (`listing_status = live_unclaimed`):

- Banner at top: "Community Listed — This business has not yet claimed its profile. Information provided by the Mapping With Melanin community."
- "Claim This Business" button (for owners to claim their listing)

For cultural sites and heritage landmarks:

- Historical significance section
- "Add to Living Legacy" or "View City Story" link

4. Pin Visual Distinction on Map

Users must be able to tell pin types apart AT A GLANCE on the map:

Pin Type	Suggested Visual	Color
----------	------------------	-------

Business (restaurant, salon, etc.)	Store/building icon	Gold
Cultural Site (museum, historic site)	Landmark/monument icon	Deep brown or bronze
HBCU	Graduation cap or book icon	Purple
Heritage District	Area boundary or district icon	Warm amber
Farmers Market	Basket/produce icon	Green
Mural / Public Art	Palette/brush icon	Teal or coral
Church / Religious	Church/cross icon	Soft white or cream
Park / Outdoor	Tree/leaf icon	Forest green
Community Org	People/hands icon	Community gold

These don't need to be perfect — but they need to be **DISTINGUISHABLE**. A user should be able to look at the map and say "oh, those purple ones are HBCUs, those green ones are markets."

5. Web Map — Cultural Pins for Philadelphia

The web map currently shows ZERO cultural pins. At minimum, Philadelphia's cultural sites must appear on the web map (since Philly is already live). This is what waitlist visitors see when they check out the website.

6. Living Legacy Connection

When viewing a cultural site pin, there should be a link/button to "Explore [City]'s Living Legacy" that takes them to the city's Living Legacy page (which now has the city_profiles data — historical context, key neighborhoods, cultural anchors).

What This Should NOT Include (Keep Scope Tight)

-  Do NOT build the 4-layer business card hierarchy yet (that's Build 105)
-  Do NOT build the endorsement tag system yet (that's Build 105)
-  Do NOT build the "What stands out?" dynamic tags yet
-  Do NOT build Direct Commerce
-  Do NOT touch the onboarding flow

Focus ONLY on surfacing the data that already exists in Postgres. The data is there. The schema needs updating. The API needs to return it. The UI needs to show it. That's it.

Verification — Show Me When Done

Once this ships, show me the demo I originally requested:

1. Screen recording walking through 6 pin types
 2. Each pin tapped, card shown, content visible
 3. Visual distinction clear on the map
 4. Visit_tips displaying in Kinfolk voice
 5. Unclaimed banner showing on community-listed businesses
 6. Web map showing cultural pins in Philadelphia
-

Priority Order Within Build 103

1. **Task #101 (this)** — Pin experience end-to-end ← FIRST
2. Bug fixes (interests saving, heritage transfer)
3. Language audit deployment (174 changes already committed)
4. 16 city launches (promote staged → live_unclaimed)
5. Admin tester toggle
6. Demo businesses for satellite cities
7. Font scaling fix

Task #101 is the foundation. Everything else builds on top of it. If the pins don't work, nothing else matters.
