

MWM Authenticated Audit — Raw Notes (Aug 8, 2026)

Homepage (unauthenticated), <https://www.mappingwithmelanin.com/>

- Loads. Title: "Mapping With Melanin™ — Find Minority-Owned Businesses & Community"
- Nav: MWM™ | About | Features | For Business Owners | Contact | dark-mode toggle | Join the Waitlist
- NOTE: There is NO visible "Log In" / "Sign In" link in the top navigation on the marketing homepage. Only "Join the Waitlist".
- Hero: "Map Your Life. Connect Deeper. Live With Purpose." + waitlist form (first/last name, email, city, state, minority-owned toggle, referral code, family circle toggle, city nomination)
- Quick links: /preview (Choose Your Experience), /businesses, /safety, /travel (KinfolkAI), /community
- Stats claimed: 124+ Businesses Listed, 31 Cities Covered, 22,846+ Community Reviews, 63+ Community Members
 - "22,846+ Community Reviews" vs "63+ Community Members" — implausible ratio; likely seeded/aggregated number. Trust risk.
- Waitlist city list shows duplicated/unnormalized entries: "Atlanta, GA 3 waiting" AND "Atlanta 2 waiting"; "Philadelphia, PA 2 waiting" AND "Philly 1 waiting" AND "Philadelphia 1 waiting". City names are not normalized.
- Testimonials (Aaliyah T., Marcus J., Simone R., DeShawn M.) use Pexels stock photos — synthetic testimonials on production marketing page.
- Footer: /cities, /resources, /safety, /community-guidelines, /membership, /roadmap, /trust-and-safety, /terms, /privacy-policy
- "COMING SOON — The App Is Coming" iOS/Android section present.
- Contact Us in footer is a mailto:, not a page.

1. LOGIN EXPERIENCE

- /login exists and renders a clean "Welcome Back" card with Sign In / Create Account tabs, email, password (with show/hide eye), Forgot password link.

- Login SUCCEEDED with apple.reviewer@mappingwithmelanin.com. Roughly 3-6 seconds from click to redirect (spinner shown on button; two view polls needed). No error messages.
- LANDING PAGE AFTER LOGIN = "/" (the MARKETING HOMEPAGE), not a personalized dashboard/map/explore.
 - P0/P1 UX issue: after authenticating, the user is dumped onto the same marketing landing page that shows "Join the Waitlist" hero form, "COMING SOON — The App Is Coming", testimonials, referral/waitlist leaderboard. An authenticated trailblazer member is being asked to join the waitlist they are already past.
- Nav DOES change when authenticated: Explore | Map | Businesses | Community | Safety | KinfolkAI™ | Events | About | Features | For Business Owners | Contact, plus a notifications bell (/notifications) and Profile (/profile). Good.
- A floating KinfolkAI™ launcher appears bottom-right: "KinfolkAI™ / What can I help with?" — links to /travel. Greeting text here is "What can I help with?" (NOT "Plan your next trip"). Good.
- NOTE: There is NO "Log In" link on the unauthenticated homepage nav — a returning user has no discoverable way to sign in from the front page. They must know /login. P1.
- Homepage stat counters initially render as em-dashes ("—") then populate to 124+ / 31 / 22,846+ / 63+ — visible loading flash.

Verified session (GET /api/auth/user, 200 OK)

id a2afba36-ea22-4a6a-9f47-c34dd46129d4; role "tester"; email apple.reviewer@...; approved true; name Alex Johnson; username alex_johnson_mwm; memberType/tier "trailblazer"; emailVerified true; homeCity "Washington, DC"; trustLevel 5; reputationScore 120; profileSetupComplete true; testingMode true; profileImageUrl null; bio present; isPrivate false; showCity true; allowDm true.

=> Account is provisioned exactly as described. Auth/session works and cookie persists.

2. MAP PAGE (/map)

- Map DOES load (Google Maps JS API, custom warm/tan MWM style, "Map data ©2026 Google"). ~5-8s with a "Loading map..." spinner first.
- **CRITICAL FINDING: map centers on PHILADELPHIA, not Washington DC.** User's homeCity is "Washington, DC" (confirmed via /api/auth/user) yet initial viewport is centered on Philadelphia/Delaware Valley (visible labels: Philadelphia, Camden, Cherry Hill, Conshohocken, Drexel Hill, Sharon Hill, Chester). Home-city centering is NOT implemented / ignores the profile.

- Google Maps API key is exposed in tile request URLs (AlzaSyD-QfIBkAV_ps-8Y290jBLvWXbJyMCpmzE). Client-side keys are normal for Maps JS, but this key **MUST** be HTTP-referrer restricted or it can be abused and billed. Verify restriction.
- Filter/legend chips at bottom-left: Businesses, Cultural Sites, HBCUs, Festivals, Community Events, Markets, Public Art (7 layer toggles).
- Search box top-left: "Search businesses..."
- Markers detected in DOM with aria labels: Cherished Beauty Supply, Angie's Eats, Little Essentials, ISSAAESTHETICS Beauty Salon & Barbershop, Philly Barber Studios, AMINA, SOUTH, The Nail Jawsns, Smoke & Soul, Community Wealth Building Workshop — plus odd entries "Harrison", "Loveland", "Pueblo" (Colorado towns — likely sundown-town records rendering as unlabeled/ambiguous pins).
- NO left/right sidebar list of places is visible on desktop at this viewport — only the search field and the legend. The task asked "does clicking a sidebar item fly the map" — there is no sidebar list to click. Needs verification of whether one appears after search.
- KinfolkAI floating launcher on /map says "Need help finding something?" (context-aware copy, good).

API-verified data inventory (authenticated)

Endpoint	Status	Result
/api/businesses	200	total = 10 , returned 10, featuredCount = 0
/api/cultural-sites	200	total 2000 returned (capped), categories facet sums to ~2,900+ rows
/api/sundown-towns	200	total = 69
/api/events	200	1 event only ("Community Wealth Building Workshop", Houston TX, Aug 15 2026)
/api/map/pins, /api/map-pins, /api/pins, /api/hbcus, /api/festivals, /api/markets, /api/public-art	404	not implemented under those names

- **The ENTIRE business directory is 10 records.** Full list: Cherished Beauty Supply (Darby PA), Candy Clouds By Cass (Santa Clara CA), Angie's Eats (Philadelphia PA), Little

Essentials (New York NY), ISSAAESTHETICS Beauty Salon & Barbershop (Silver Spring MD), Philly Barber Studios (Philadelphia PA), AMINA (Philadelphia PA), SOUTH (Philadelphia PA), The Nail Jawsns (Philadelphia PA), Smoke & Soul (Chicago IL).

- Homepage marketing claims "124+ Businesses Listed", "31 Cities Covered", "22,846+ Community Reviews", "63+ Community Members", hero claims "200+ Cities Covered". Actual businesses = 10, in 6 cities. **The public marketing numbers are not supported by production data.** This is a material trust/Apple-review risk (misleading claims).
- Cultural sites data IS substantial and real: HBCU 101, landmark 182, museum 202, restaurant 383, business 291, market 89, festival 76, community_event 136, public_art 19, cultural_organization 98, heritage_district 35, Cultural Celebration 54, Historical Sundown Town 12-15, plus Native American Heritage 26, Hispanic & Latino 15, LGBTQ+ 9-10, Women's History 8, Caribbean 4, Asian Pacific 2, African 2, Immigrant 5, Multicultural 3.
- **Category taxonomy is inconsistent/duplicated:** snake_case machine values coexist with Title Case human values for the same concepts — e.g. HBCU vs hbcu_district ; mural_public_art vs public_art ; museum_gallery vs Museum & Gallery vs museum ; historic_market vs community_market vs market ; civil_rights_landmark vs Civil Rights Site vs Civil Rights ; Historical Sundown Town appears in BOTH cultural-sites and the separate sundown-towns table; LGBTQ+ History vs LGBTQ+ Heritage . Also **2,518 rows have label: null** in the categories facet — i.e. the majority of cultural rows are uncategorized, so they cannot be filtered by layer.
- /api/cultural-sites returns a 2.2 MB JSON payload in one shot with no pagination/bbox filtering. Performance/cost problem on mobile.
- Sundown town pins appear on the map with bare city labels ("Harrison", "Loveland", "Pueblo", "Dubuque", "Anna", "Cicero", "Ferguson", "Dearborn", "Edina", "Levittown", "Vidor", ...) — 69 records. Some have descriptive labels ("Anna, Illinois — Historical Sundown Town"), many do not. Inconsistent labeling means a user sees an unexplained pin on a town with no context. **Sensitive-content risk: an unlabeled pin on a living town, with no framing, is defamation-adjacent and confusing.**

Map pin interaction

- Clicking a business marker (The Nail Jawsns) DID NOT open an info window, popup card, or navigate to a detail page. Instead the map **panned/recentered to Washington DC**. No InfoWindow appeared, no bottom sheet, no detail card. Element indices were re-issued as bare `<canvas>` nodes after the click, meaning the marker layer re-rendered.
=> **P0: map pins are not tappable to a detail card.** The core discovery loop (see pin -> read business -> act) is broken on the web map. Note this is also the exact interaction

that reportedly crashes on the native app (marker view recycling), so both surfaces have unresolved marker interaction problems.

- After that interaction the map does show the DC area — so DC coordinates exist in the app, but they are not used as the initial center on load.
- At DC zoom, the legend shows: Businesses, Cultural Sites, HBCUs, Festivals, Community Events, Markets, Public Art (7 types). Pins visible in DC/MD/VA include diamond-shaped cultural site markers and one business pin near Silver Spring (ISSAAESTHETICS).
- Washington DC — the user's home city — appears to have essentially ZERO MWM businesses. Only cultural-site diamonds. The single nearby business is ISSAAESTHETICS in Silver Spring MD.

CORRECTION / refinement on pin clicks

- Programmatic click on the Howard University marker DOES open a Google InfoWindow with real content:
"HBCU / Howard University / Washington, DC / Walk through the yard on a weekday afternoon — the campus energy and the Founders Library steps give you a real sense of... / Learn More →"
=> InfoWindow + "Learn More" link works, and the HBCU visit-tip copy is genuinely good, culturally-voiced content.
- So pin clicks DO function. However: the InfoWindow description is **truncated mid-sentence with an ellipsis** ("give you a real sense of...") and the card is small.
- Human-style click on the business pin resulted in a map pan rather than an InfoWindow — likely a hit-target/precision problem: the marker glyphs are small and the clickable area is offset from the visual icon, so a real user's tap lands on the map instead of the marker. **P1: marker hit targets are too small / mis-registered.** On mobile with a fingertip this will be worse.

Map filters + sidebar (major discovery)

- The 7 legend chips at the bottom ARE working layer toggles. Verified marker counts on the loaded viewport region (total 1,070 markers in DOM):
Businesses off -> 67 remain (delta 1,003); Cultural Sites off -> 805 (delta 265); HBCUs off -> 159 (delta 911); Festivals off -> 137 (delta 933); Community Events off -> 84 (delta 986); Markets off -> 99 (delta 971); Public Art off -> 67 (delta 1,003).
These deltas are mathematically impossible for independent layers — they sum to far more than 1,070. Turning off ANY single layer removes ~90%+ of pins. That means the chips are behaving as *exclusive/last-clicked-wins* selectors, not additive toggles, and the layer counts don't reconcile.

P1: layer toggles are semantically broken — a user turning off "Public Art" loses 1,003 of 1,070 pins.

- The chips have **no aria-pressed state and no visible checked state before click** (aria=null on all). A user cannot tell which layers are currently on. **P1 accessibility + state legibility.**
- Clicking the "Businesses" chip actually **opened a full "Explore the Map" left panel** (this is the sidebar). It contains a "Search city or business..." field, category pills (ALL / FOOD / BEAUTY / FINANCE / WELLNESS / RETAIL / CULTURAL / PROFESSIONAL), and "10 locations" with a scrollable card list. Each card: name, category, city/state, "View →" link to /businesses/{uuid}, and a "Directions" button that opens Google Maps.
=> So a sidebar list DOES exist, but it is **hidden behind a chip that looks like a legend key, not a panel opener**. Discoverability failure. **P1.**
- Sidebar says **"10 locations"** — confirming the entire business directory is 10 records, and confirming the map's "Businesses" layer only has 10 items despite the marketing claim of 124+.
- Business IDs captured for direct visits:
Cherished Beauty Supply e585c27e-9f82-4276-ab7d-679dce08e999
Candy Clouds By Cass 2629d8f2-564e-428f-b31f-70b701ff4d69
Angie's Eats f1a18423-9240-4656-a645-73402900fd27
Little Essentials bf9659d9-86ee-4df2-9ff6-0c87a8a7af23
ISSAAESTHETICS c55dd981-abc1-4348-aa98-eea18bcb26a4
Philly Barber Studios caeb1377-b990-4151-a243-8dca30b0365b
AMINA 3bdd9607-f940-4dbf-99cb-5b6631b6da1c
SOUTH 9ff0d750-b738-492f-a0a6-85542dc2a57f
The Nail Jawns 3e201c11-b0f7-4852-9630-e6b829e361a4
Smoke & Soul sub_1781823981924_jmi8 <-- NOTE: non-UUID "sub_"-prefixed id, i.e. a user-submitted record with a different id scheme. Inconsistent ID strategy.
- **NO ownership filters exist anywhere on the map** — no women-owned, minority-owned, Black-owned, veteran-owned toggle. Page text search for "women-owned"/"minority-owned"/"black-owned" returns false on /map. **P1: the platform's core differentiator is not filterable.**
- Only 9 of 10 business cards have images; 9 show a blank grey placeholder. Only "Smoke & Soul" has a photo, and it is a **Pexels stock image** (pexels-photo-5836370), not a real photo of the business. **P1: real businesses on a discovery map with zero imagery, plus stock photos misrepresenting a real business.**

- Category label inconsistency in the same list: Smoke & Soul is "FOOD" while others are "FOOD & DRINK".

3. BUSINESSES PAGE (/businesses) — MOST SERIOUS FINDING

/businesses is NOT a real directory. It is a marketing page populated entirely with fabricated demo businesses.

- Hero: "Support Trusted Businesses. Everywhere You Go." Stat band: "2,400+* Verified Businesses / 48* States Covered / 94/100* Avg. Confidence Score / 100%* Authenticity Checked".
- The six "business" cards shown are ALL FAKE and every one of them links to **/explore**, not to a business detail page:
 1. The Gathering Table — Restaurant, Atlanta GA, 96/100, 97% Recommend, 94% Return Alone, 4.9, tags Community Trusted / Soul Food / Black-Owned
 2. Heritage Boutique Hotel — Hotel, New Orleans LA, 97/100, 98%/96%, 4.9, Top Rated / Boutique / Black-Owned
 3. Diaspora Arts Collective — Cultural Landmark, Harlem NY, 98/100, 99%/97%, 5, Highly Recommended / Art / Culture
 4. Afrobeats & Culture Fest — Community Event, Houston TX, 93/100, 95%/91%, 4.7, Local Gem / Live Music / Black-Owned
 5. Carter & Associates Law — Professional Services, Chicago IL, 92/100, 94%/90%, 4.8, Community Trusted / Legal / Black-Owned
 6. Roots & Routes Café — Restaurant, Washington D.C., 89/100, 87%/83%, 4.6, Pan-African / Community Space / Black-Owned
- **NONE of the 10 real businesses appear on /businesses.** The Nail Jawns, Angie's Eats, ISSAAESTHETICS, Cherished Beauty Supply — the founder's actual seeded businesses — are completely absent from the page called "Businesses". They only exist on /map (behind the hidden panel) and at direct /businesses/{id} URLs.
 => **P0: The primary discovery page shows zero real inventory and six invented businesses.**
- There IS a disclaimer at the very bottom of the page: "* All figures marked with an asterisk are illustrative placeholders for visual purposes only and do not reflect actual data." Good faith, but it is below the fold, in small text, after the user has already read six named businesses with specific scores. The asterisk convention does not tell a user that *The Gathering Table* itself doesn't exist. **Apple App Review commonly rejects for**

placeholder/demo content presented as real (Guideline 2.1 / 2.3.1 accurate metadata).

- Category filter pills present: All / Restaurants / Hotels & Stays / Salons & Spas / Retail & Boutiques / Legal & Financial / Health & Wellness / Tour Operators / Professional Services.
- Ownership filter pills present HERE (unlike /map): Black-Owned, Minority-Owned, Hispanic-Owned, Women-Owned, Veteran-Owned, LGBTQ+-Owned, Indigenous-Owned, Melanated Diaspora-Owned, Disability-Owned. Excellent taxonomy breadth and matches the founder's diversity intent.
- Utility links: Submit a Business (/for-business-owners), Rate a Neighborhood (/rate-neighborhood), Near Me (/map).
- Copy for owners is well-judged and inclusive: "All minority-owned businesses are welcome. We understand every business is at a different stage in its journey — you don't need to be established to join."
- KinfolkAI launcher copy here: "Ask me anything".

/businesses filters are decorative

- Clicking "Black-Owned", then "Women-Owned", then "Restaurants" produced **zero change** in the result set (8 card links before, 8 after each). All card links remain `/explore`. The pills receive a selected style but perform no filtering.
=> **P0/P1: every category and ownership filter on /businesses is non-functional.** Notably "Women-Owned" returns the same 6 cards, none of which are tagged Women-Owned.
- There is no search field, no sort, no pagination, and no result count on /businesses.
- "Browse Directory →" anchors to `#directory` on the same page — it does not lead to an actual directory of real businesses.

4. BUSINESS DETAIL PAGES — these are actually GOOD

The Nail Jaws (Philadelphia) — /businesses/3e201c11-b0f7-4852-9630-e6b829e361a4

- Page title correctly becomes "The Nail Jaws — Mapping With Melanin™" (per-page SEO title works).
- Hero: category pill "BEAUTY & PERSONAL CARE", H1 "The Nail Jaws", "Philadelphia, PA".

- Actions: Share / Save / Check In.
- Tabs: Overview / Reviews / Location & Contact.
- Description present: "Community-recommended nail salon serving Philadelphia's West side. Walk-ins welcomed, appointments preferred."
- Ownership badge: **"Verified Black-Owned"** with explanatory copy "This business is part of our verified network of minority-owned enterprises, supporting economic empowerment."
- **Community Vibes** section, "Tap to tag your experience": 💎 Hidden Gem, 🏛️ Community Staple, 🤝 Grandma Approved, ✨ Worth Every Visit, 🌹 Date Night Worthy, 👨‍👩‍👧 Family Friendly, 🍷 Black Excellence. Culturally-specific endorsement tags are live and tappable — exactly the intended concept.
- Address: 429 N. 64th St, Philadelphia, PA. "Get Directions" -> maps.google.com query link (works).
- Website: www.tiktok.com/@the.nail.jawns (TikTok as the primary web presence — appropriate for this business).
- "Hours not listed — call ahead to confirm" — graceful empty state, but note there is **no phone number** on the page, so "call ahead" is not actionable. Minor content contradiction.
- "Is this your business? Claim this listing to manage your profile, respond to reviews, and get verified." — claim flow entry point present. This matches the founder's live_unclaimed seeding strategy.
- HERO IMAGE IS EMPTY — a large blank dark banner ~450px tall occupies the top of the page with no photo. **P1: every business detail page opens with a large void.**
- KinfolkAI launcher copy is contextual: "Want to know what the community says?"

Reviews tab (The Nail Jawns)

- Reviews tab works. Shows "— 0 REVIEWS", "Community Voices / Read what the Melanin Maps community has to say about their experience.", a 5-star rating picker, a textarea "Share your experience with the community...", a "Submit Review" button, and "No reviews yet."
- **BRAND BUG: the copy says "the Melanin Maps community" — wrong product name.** The product is Mapping with Melanin™. **P2 but embarrassing, and it is user-facing on every business page.**
- Review composer is available to the authenticated user. 0 reviews exist on this business.

- Contrast with homepage claim of "22,846+ Community Reviews" — real review count on real businesses is 0.

Save / Vibe tag / Review persistence

- "Save" WORKS and persists: toast "Added to saved places"; GET /api/saved-places now returns savedBusinessIds ["41","49","74","82","44","3e201c11-..."]. Confirmed server-side.
 - BUT the pre-existing saved IDs are "41","49","74","82","44" — **short integer IDs that do not correspond to any of the 10 real UUID businesses**. These are orphaned saves pointing at demo/legacy records. A Library/Saved view would show 5 broken entries. **P2 data integrity**.
- "Grandma Approved" vibe tag click renders "+1" optimistically in the UI. However GET /api/businesses/{id} still returns "vibes":[] and "tags":[] , and there is no /vibes endpoint (404). **The vibe tag count appears to be optimistic-only local state and is NOT persisted**. Needs owner confirmation but the evidence says the endorsement is cosmetic. **P1 — this is the signature feature of the product**.
- /api/businesses/{id}/reviews returns 404 — reviews are not exposed at that path; the review composer's target endpoint should be verified.
- Full business record for The Nail Jawns is well-structured: category "Beauty & Personal Care", subcategory "Nail Salons & Nail Artists", address, city, state, rating "0.0", reviewCount 0, verified **false**, featured false, blackOwned true, ownershipDesignations ["Black / African American-Owned"], verifiedDesignations [], diasporaCountries [], confidenceScore 0, safetyRating null, wouldReturnAlone null, recommendationRate null, lat/long present.
- **CONTRADICTION: the UI badge says "Verified Black-Owned" while the record says verified: false and verifiedDesignations: []** . The page is asserting verification the data does not support. This is a trust and potentially legal claim. **P0**.
- confidenceScore 0 / safetyRating null / wouldReturnAlone null / recommendationRate null on all real businesses, yet those exact metrics are advertised on /businesses as the platform's core value ("Community Confidence Score", "would members return alone?"). The metric framework exists in the schema but has no data.

The four requested businesses — API-verified records

Field	The Nail Jawns	Angie's Eats	ISSAAESTHETICS	Cherished Beauty Supply
Address	429 N. 64th St	"Philadelphia, PA" (no street!)	11409 Amherst Ave Unit A	526 Main St

Stored vibes	[]	"Auntie Energy", "Locals Know"	"Luxury Without The Attitude"	[]
Description	present, good	present, good	present, good, notes "Se Habla Español"	present, good
status	active	active	active	active

OBSERVATIONS:

- **Ownership diversity is genuinely implemented as the founder intended** — Angie's Eats is Latino/Hispanic-Owned, ISSAAESTHETICS is Dominican-Owned, not everything is blanket "Black-Owned". This directly matches the stated requirement. Credit due.
- **Stored culturally-specific vibes exist and are excellent:** "Auntie Energy", "Locals Know" (Angie's Eats), "Luxury Without The Attitude" (ISSAAESTHETICS). These are real, hand-authored, culturally resonant tags.

- HOWEVER the detail page for The Nail Jaws rendered a **generic hardcoded set** (Hidden Gem / Community Staple / Grandma Approved / Worth Every Visit / Date Night Worthy / Family Friendly / Black Excellence) that is IDENTICAL regardless of business — and it did NOT display the business's own stored vibes. So the good data in the DB is not what the user sees, and the displayed set is not dynamic by business type. **P1: vibe display is static/hardcoded, ignores stored per-business vibes, and is not differentiated for professional services vs restaurants (the founder's explicit requirement).**
- **Angie's Eats has no street address** — the address field literally contains "Philadelphia, PA". Its lat/long (39.948, -75.158) is a generic Philadelphia centroid, so its map pin is in the wrong place and "Get Directions" will send a user to a city center, not the restaurant. **P1 data quality.**
- Every real business has **no phone, no hours, no images**. All four show "Verified" style badges in UI while `verified:false`.
- All websites are social profiles (TikTok/Instagram) — legitimate for these businesses, and a nice reflection of how these owners actually operate.

Angie's Eats (Philadelphia) — /businesses/f1a18423-9240-4656-a645-73402900fd27

- Renders: "FOOD & DRINK" pill, H1 "Angie's Eats", "Philadelphia, PA". Share/Save/Check In. Overview/Reviews/Location & Contact tabs.
- Description: "Latin Soul Food in Philadelphia. The Shrimp Alfredo with 6 wings combo is a must-try." — great, specific, human copy.
- **NO OWNERSHIP BADGE AT ALL.** The Nail Jaws showed a "Verified Black-Owned" card; Angie's Eats shows nothing, even though the record has ownershipDesignations ["Latino / Hispanic-Owned"]. The badge component appears to key off the `blackOwned` boolean only, so Hispanic-, Dominican-, Indigenous-, Caribbean-owned businesses get NO recognition badge.
=> **P0 for the founder's stated diversity requirement.** The one thing she explicitly asked for — authentic representation of different minority communities — is invisible in the UI for non-Black-owned businesses.
- Community Vibes shows the SAME hardcoded 7 tags including "🍌 Black Excellence" on a **Latino/Hispanic-owned** restaurant, while its actual stored vibes ("Auntie Energy", "Locals Know") are not shown. Culturally wrong.
- Contact & Info displays "Philadelphia, PA / Philadelphia, PA" (address duplicated because address field == city+state). "Get Directions" builds `maps.google.com/?`

q=Philadelphia%2C%20PA%20Philadelphia%20PA — sends the user to the middle of Philadelphia. **Broken directions.**

- Empty hero banner again. No images.

ISSAAESTHETICS Beauty Salon & Barbershop (Silver Spring, MD) — c55dd981-...

- Renders correctly. "BEAUTY & PERSONAL CARE", H1, "Silver Spring, MD".
- Description: "Full-service beauty salon and barbershop in Silver Spring, MD. Specializing in Laser Hair Removal, Blow Outs, Chemical Peels and More. Se Habla Español." — strong, and the Spanish note is a nice cultural-competence signal.
- **NO ownership badge** despite being Dominican-Owned. Same defect as Angie's Eats.
- Same hardcoded 7 vibes including "Black Excellence" on a Dominican-owned salon; its real stored vibe "Luxury Without The Attitude" is not displayed.
- Address 11409 Amherst Ave Unit A, Silver Spring MD — correct and specific. Get Directions link is properly formed.
- Instagram link correct. No phone, no hours, no images. Empty hero.

Cherished Beauty Supply (Darby, PA) — e585c27e-...

- Renders correctly. "BEAUTY & PERSONAL CARE", H1, "Darby, PA".
- Description: "Plant-Based Hair & Skin Care. Black-Owned Beauty Supply. Willing to ship!"
- Ownership badge: "Verified Black-Owned" present (blackOwned true).
- Same hardcoded 7 vibes. Address 526 Main St, Darby PA — correct. Directions link correct. TikTok link correct.
- No phone, no hours, no images. Empty hero.
- Note: the detail page never surfaces the "Willing to ship!" as an attribute/filter, and there is no e-commerce/contact affordance beyond TikTok.

5. CULTURAL SITES / HBCUs

- **101 HBCUs** in the data (category "HBCU"), plus a "hbcu_district". Data quality is HIGH. Howard University record:
 - description: "Founded in 1867, Howard is one of the nation's premier HBCUs, producing generations of Black leaders, doctors, lawyers, and artists. Home to the Moorland-Spingarn Research Center."

- visitTip: "Walk through the yard on a weekday afternoon — the campus energy and the Founders Library steps give you a real sense of why Howard is the Mecca."
 - significance: "The capstone of Black education — alumni include Kamala Harris, Thurgood Marshall, Toni Morrison, and more."
 - era "1867–present", address "2400 6th St NW, Washington, DC 20059", yearEstablished 1867, isVerified true, verifiedSource "White House Initiative on HBCUs", isAccessible true, isFamilyFriendly true, admissionFree false, audioGuide false, externalUrl home.howard.edu.
 - **imageUrl: null** — no photo.
 - **listingStatus: "staged"** — the record is not marked live/published.
 - Schema is rich and thoughtfully designed: heritageCategory, ethnicCommunity, culturalCommunity, visitTip, contentNote, pinType, listingStatus, era, significance, isAccessible, isFamilyFriendly, admissionFree, audioGuide, verifiedSource.
 - **THERE IS NO CULTURAL SITE / HBCU DETAIL PAGE.** /cultural-sites/{id} returns the 404 page ("404 / Page Not Found / Sorry, the page you're looking for doesn't exist or has been moved."). There is no /hbcus route in the nav.
 - The InfoWindow's "Learn More →" points to <https://home.howard.edu> — i.e. it sends the user OFF the platform to the university's own website. MWM keeps none of the engagement.
- => **P0: all 101 HBCUs and ~2,900 cultural records have NO in-app detail page.** A user cannot read the full description, see the significance text, view the address, or contribute. All that excellent content is trapped in a truncated 3-line InfoWindow.
- Consequently: no photos, no way to add photos or stories, no reviews, no save, no check-in on cultural sites. The "community archive" concept for tour cities has no surface to live on yet.
 - There is also no dedicated HBCU browse/index page — the only access is finding the pin on the map.

6. EVENTS PAGE (/events)

- Page exists. Header "GATHER & CONNECT / Community Events / Discover networking sessions, cultural festivals, pop-ups, and celebrations in your area."
- Loads with 6 skeleton placeholder cards, then resolves to **exactly ONE event:** "Community Wealth Building Workshop", Finance, Free, Houston, Aug 15 2026, 10:00 AM–2:00 PM, Third Ward Community Center, organizer "Black Wealth Alliance", "0 Attending", RSVP button.

- The API record says attendees: 212 but the card renders "0 Attending" — display bug or field mismatch. P2.
- Location line renders as ", Houston" — a leading comma from an empty venue/state field. P2 cosmetic but visible.
- The event image is an **Unsplash stock photo** (images.unsplash.com/photo-1556742049...), not a real event photo.
- RSVP button click produced no visible confirmation, no toast, no state change (still "RSVP", still "0 Attending"). **P1: RSVP appears non-functional.**
- **NO events exist for Washington DC (the user's home city) or for ANY of the 13 Welcome Home Tour cities.** The only event is in Houston. Meanwhile the cultural-sites table contains 136 community_event and 76 festival records that are NOT surfaced on /events — the events page and the map's Festivals/Community Events layers are drawing from different sources.
=> **P1: events data is fragmented across two systems; /events shows 1 of ~200+ event-type records.**
- No filters, no calendar view, no city filter, no "add an event" affordance for members on /events.
- Notably: Aug 15, 2026 is the tour start date, and the only event on the platform is in Houston (the final tour city), not Philadelphia (the first).

7. COMMUNITY PAGE (/community)

- Page exists but is **another marketing page, not a community**. No feed, no posts, no composer, no member directory.
- Six "How It Works" concept cards (Community Groups, Local Meetups, Networking, Cultural Events, Travel Partnerships, Global Network) — all descriptive copy, no functionality.
- "DISCOVER FEATURED" with Groups/Events/Travel tabs shows four invented groups with **fabricated member counts**: Solo Minority Travelers (4.2K members, Global), Minority Entrepreneurs Abroad (2.8K, Global), ATL Cultural Explorers (1.5K, Atlanta GA), Afro-Caribbean Connections (3.1K, Global).
 - Total implied 11.6K members vs the real 63 community members. **These are not asterisked or disclaimed.** P0 for credibility/Apple review.
- **CRITICAL AUTH BUG: every "Join Group" button and "View All Groups" links to /login** — while the user is **ALREADY LOGGED IN**. An authenticated trailblazer clicking "Join Group" is sent to a sign-in screen. **P0.**

- Three more fabricated testimonials (Jasmine T., Marcus W., Aisha R.) with invented outcomes ("I found my business co-founder through a Mapping with Melanin meetup") — presented as real member quotes on a platform with 63 members and no meetups.
- Bottom CTA "Join the Movement — Your Community Is Waiting / Sign up for early access" -> /membership. Again waitlist-oriented copy served to an existing member.
- POSITIVE: there IS a proper legal disclaimer — "Posts and reviews belong to their authors and do not reflect the views of Mapping with Melanin™. [Full disclaimer]" linking to /trust-and-safety#community. Good UGC governance instinct.
- Answers to the brief: posts from other users — NO, none exist. Create a post — NO, no composer anywhere.
- KinfolkAI launcher copy here: "Let's connect you".

8. SAFETY PAGE (/safety)

- Page exists and is the most substantive marketing page on the site. Hero "Travel Smarter. Travel Informed."
- Six concept cards: Community Reviews, Location Safety Scores, Verified Member Program (mentions "liveness checks and anti-fraud protection"), Incident Reporting, Transparency Ratings, Trusted Network.
- "DESTINATION SCORES / Top-Rated Cities" with **fabricated scores and review counts, NOT asterisked**:
 Atlanta GA 9.4 (1,240 reviews, ↑ Improving); New Orleans LA 8.9 (876); Harlem NY 9.1 (2,103, → Stable); Houston TX 8.7 (954); Chicago IL 8.5 (1,432); Washington D.C. 9.2 (1,788, ↑ Improving).
 - Total 8,393 invented reviews presented as community safety data. **P0** — this is the single most dangerous category of fake data on the platform, because users are told to make personal-safety decisions from it.
- Three fabricated "Verified Traveler" reviews with helpful counts (Keisha M. 42, Darius P. 38, Simone A. 61) and specific dates (Jun 10 2026, Jun 5 2026, May 28 2026).
- A "Community Alert — 1 report in last 30 days" widget for Harlem NY. Fabricated incident signal.
- **NO WAY TO SUBMIT A SAFETY REPORT.** There is no report form, no "Report an incident" button, no flow anywhere on /safety. "Incident Reporting" is described but not implemented. "View All Destinations" -> /businesses. "Read All Reviews" and "Get Early Access" are dead/waitlist buttons.

- POSITIVE and important: strong FAQ accordion (11 questions incl. moderation, disputes, verification, privacy) and two prominent, correctly-worded disclaimers:
 - "Safety ratings are based on community reports at a point in time. Conditions can change rapidly."
 - **"We are not an emergency service. If you are in danger, call local emergency services immediately."**

These are exactly right and show mature risk thinking.

- POSITIVE: framing is consistently about being **welcomed/inclusive** ("how welcoming they are to Minority guests", "Welcoming" tag on Atlanta) rather than crime statistics — this respects the founder's stated principle. No police/crime/arrest data anywhere. Credit due.
- KinfolkAI launcher copy here: "I'm here if you need me" — well-judged for a safety context.

9. KINFOLK AI (/travel) — the strongest surface on the platform

- **GREETING IS CORRECT.** It says: **"Let's map it out."** / "I can help you find trusted businesses, keep you safe in unfamiliar places, connect you with your community, or just talk. What's on your mind?"
 - It does NOT say "Plan your next trip." Confirmed absent.
 - Subtitle: "KinfolkAI™ — Your Community Companion". Correct positioning as a companion, not a travel agent.
- **Floating launcher copy is context-aware across the site** (verified): "/" -> "What can I help with?"; /map -> "Need help finding something?"; /businesses -> "Ask me anything"; business detail -> "Want to know what the community says?"; /community -> "Let's connect you"; /safety -> "I'm here if you need me". This is a genuinely thoughtful, well-executed detail.
- Intent chips (8): 🏠 I'm Moving, ✈️ I'm Traveling, 💼 My Career, 🏢 Find Businesses, 🤝 Community, 🛡️ Stay Safe, ❤️ Healthcare, 🎓 Schools. This is life-mapping, not trip-planning — matches the product vision.
- Suggested prompts: "Where's good to eat in Atlanta?", "Best minority-owned hotels in Houston", "What's the vibe in New Orleans?", "Hidden gems in DC", "Family spots in Chicago", **"Would my community like this city?"** — the last one is exactly the emotional-urgency framing the founder wants.

- **Taste Profile panel** is substantial: Favorite experiences (12 options), Skip these (7), Budget vibe (Budget/Mid-range/Luxury/No limit), How you travel (Solo/Couple/Family/Friend group/Work trip/Spiritual), Who you travel with (Solo/Partner/Family/Friends/Colleagues), Cities you love (add), Dietary notes (free text, "e.g. vegan, halal, gluten-free" — inclusive), Save Taste Profile.
 - NOTE: "Skip these" and "Favorite experiences" both contain "Nightlife"; "How you travel" and "Who you travel with" overlap heavily (Solo appears in both). Taxonomy needs cleanup. P3.
- Conversation history sidebar: "Past Conversations / New" with empty state "Nothing yet — start a conversation!" — persistence UI exists.
- Correct AI disclaimer present: "KinfolkAI responses may contain inaccuracies and should not replace professional advice. [Full disclaimer]" -> /trust-and-safety#ai. Good.
- Textarea placeholder: "Ask Kinfolk anything — businesses, safety, community, recommendations..." with "Enter to send • Shift+Enter for new line".

KinfolkAI actual response test — "What should I do in Philadelphia?"

- Latency: response began ~10s, fully rendered by ~15s. Shows "KinfolkAI is thinking..." during wait. Acceptable but slow; no streaming.
- **The response is genuinely excellent and on-brand.** Opening line: "Philly is a city full of rich history, diverse neighborhoods, and vibrant culture, perfect for a solo adventure. Here are some spots you might vibe with:"
- Rich structured card output: "Your Guide to Philadelphia", Must-Visit Spots, Neighborhoods, Events & Happenings, Safety Tips, Local Insights, plus follow-up chips ("More food spots", "What's the nightlife like?", "Tell me about the neighborhoods") and Share trip / Copy trip summary buttons.
- Must-Visit Spots each have a **Love it / Pass** feedback pair (preference learning loop):
 1. Aunt Berta's Kitchen — Restaurant, West Philly — "Soul food classics that feel like a hug from family." Try: Fried chicken and collard greens
 2. Amalgam Comics & Coffeehouse — Cafe, Kensington — "A unique blend of comics and coffee, perfect for nerding out." Try: Cold brew coffee
 3. African American Museum in Philadelphia — Museum, Old City — Try: The interactive exhibits
- Neighborhoods with community-voice quotes: West Philly ("Active community, generally safe during the day."), Old City ("Tourist-friendly and well-patrolled."), Fishtown ("Vibrant and bustling, especially in the evenings.")

- Events: First Friday, **Odunde Festival** (real, June, African cultural festival — correct and locally credible), Philly Vegan Pop Flea.
- Local Insights include "Check out Pennsylvania's only black-owned comic book store" (Amalgam) — accurate, specific, culturally fluent.
- **IDENTITY-NEUTRALITY RULE: PASSED.** The response never referenced the user's race, gender, or age. It said "perfect for a solo adventure" (behavior/context-based). No "as a Black woman..." framing. Compliant with the One-Way Mirror Rule.
- **PROBLEM 1 — Old City quote says "Tourist-friendly and well-patrolled."** "Well-patrolled" is police-presence framing as a safety positive. This contradicts the founder's explicit rule that safety must never be based on policing. For many users, heavier police presence is the opposite of reassuring. **P1 — must be removed from the AI's vocabulary.**
- **PROBLEM 2 — Safety Tips lean on avoidance-after-dark advice** ("Explore neighborhoods on foot during daylight hours", "Use public transit or ride-shares for evening travel"). Generic and mildly fear-based rather than welcome-based.
- **PROBLEM 3 — ZERO of the recommendations are MWM businesses.** Aunt Berta's Kitchen, Amalgam, AAMP are all external. The Nail Jawsns, Angie's Eats, Cherished Beauty Supply (all in/near Philadelphia and in the DB) were NOT recommended. The AI is not grounded in the platform's own directory.
=> **P0 for business value: KinfolkAI sends users to businesses that are not on MWM and cannot be claimed, reviewed, or monetized.** This is the biggest missed strategic opportunity on the platform, and it also means the AI may recommend businesses that don't exist (hallucination risk with no verification path).
- No citations/links on any recommendation — nothing links back to a MWM pin or business page.
