

MWM Community Entrepreneur System — Replit Comprehension Test

This test is designed to verify your understanding of the Community Entrepreneur tier, its integration into the Mapping With Melanin™ ecosystem, and the specific rules governing discovery, upgrades, and guardrails.

Instructions: Please read each scenario carefully and answer based *only* on the rules defined in the `MWM_Integrity_Partnership_Framework.md` document.

Question 1: Search Discovery & Layout

A user opens the app and searches for "Jewelry" in their local area. The system finds 12 Verified Businesses and 5 Community Entrepreneurs that match this query.

Describe exactly how these 17 results are visually presented to the user in the search results.

<!-- Expected Answer (Hidden from Replit during test):

The results must be clearly separated. The 12 Verified Businesses are displayed first at the top of the results. The 5 Community Entrepreneurs are displayed below them, clearly separated, and each of their cards must show a "Community Entrepreneur" label. They are not mixed together. -->

Question 2: Promotional Capabilities

A Community Entrepreneur who makes custom shirts wants to increase their visibility for an upcoming holiday weekend. They have \$50 to spend and want to buy a promoted listing to appear at the top of the "Apparel" search results.

Can they do this? Explain why or why not based on the tier capabilities.

<!-- Expected Answer (Hidden from Replit during test):

No, they cannot. Community Entrepreneurs DO NOT get access to advertising or promoted listings. These features are reserved exclusively for Verified Businesses. The Community Entrepreneur tier is always free and relies on organic community discovery. -->

Question 3: The Upgrade Journey

A home chef has been listed as a Community Entrepreneur for 6 months. During this time, they have completed 65 sales through their linked platforms, accumulated 115 positive community reviews, and grown to 300 followers on their MWM profile.

What specific action does the Kinfolk AI take in response to this activity, and what is the tone of that action?

<!-- Expected Answer (Hidden from Replit during test):

Kinfolk AI detects these organic growth signals and triggers a celebratory prompt (never a warning). It congratulates them on their milestone (e.g., "🎉 Your community has supported you through more than 100 sales!") and encourages them to upgrade to a Verified Business to unlock additional tools. The upgrade is encouraged, never forced. -->

Question 4: Content Placement (Feed vs. Marketplace)

A Community Entrepreneur who sells handmade candles posts an update: *"I'll be at the Juneteenth Festival this Saturday from 12-4 PM! Come smell the new summer collection."*

Where does this specific post live within the app, and how does it connect to their commerce activities?

<!-- Expected Answer (Hidden from Replit during test):

The post lives in the Community Feed (which is for conversation). However, the post MUST link back to their Marketplace profile. The Marketplace is a distinct section for commerce, separate from the feed, but feed posts act as funnels driving traffic to their Marketplace listing. -->

Question 5: Abuse Prevention Guardrails

A user registers as a "Community Entrepreneur" selling natural hair products. However, over the next two weeks, they attempt to add three different storefront locations across the city, upload a wholesale inventory catalog of 5,000 items, and attempt to add 15 employee profiles to their account.

How does the system handle this behavior?

<!-- Expected Answer (Hidden from Replit during test):

The system's guardrails intercept this. Because they are operating like a full business (multiple locations, employees, wholesale), Kinfolk prompts them to upgrade to a Verified Business. If they refuse to upgrade while continuing to operate at this scale, an administrative review is triggered to protect the integrity of the tier system. -->

Question 6: Data Continuity on Upgrade

A Community Entrepreneur finally registers their LLC and acquires their permits. They accept the Kinfolk AI prompt to upgrade to a Verified Business. They had previously earned 85 five-star reviews and 200 "put your people on" endorsements.

What happens to their existing reviews and endorsements when their profile changes to a Verified Business?

<!-- Expected Answer (Hidden from Replit during test):

All history carries forward. They do not lose their reviews, endorsements, or sales records. The platform ensures they never have to "start fresh" when they upgrade; their community trust moves with them. -->

Question 7: The Talent Pipeline

A local restaurant owner is using MWM to look for a new pastry chef. Meanwhile, in the Marketplace section, a Community Entrepreneur has been selling homemade vegan desserts and has just received their 50th glowing review.

How does the platform connect these two users, and what data source drives this connection?

<!-- Expected Answer (Hidden from Replit during test):

The platform uses the Kinfolk AI matching engine. Kinfolk monitors the Marketplace activity (reviews, endorsements, sales) as its primary data source. Upon seeing the 50th glowing review, Kinfolk proactively prompts the restaurant owner about the highly-rated local talent, and simultaneously prompts the entrepreneur asking if they'd like to be connected to restaurants seeking their specific skills. -->
