

# MWM Database Seeding Instructions: Tour Guides 1, 2, and 3

## To the Replit Agent / Engineering Team:

This document provides exact, comprehensive instructions for seeding the MWM (Mapping With Melanin) app database with the cultural guide content created by the founder. The founder has produced three guide documents covering 53 cities, hundreds of cultural sites, diaspora-owned businesses, markets, HBCUs, heritage landmarks, murals, and parks. Every single entity mentioned in these guides must become a pin on the map. If it is in the guide, it gets a pin. There are no exceptions.

## Section 1: Scope and Scale

You are extracting and seeding from three documents, which must be treated as a single unified dataset.

`MWM_Tour_Cultural_Guide_Part1.md` covers the five core East Coast tour cities: Philadelphia PA, Washington DC, Richmond VA, Raleigh/Durham NC, and Charlotte NC.

`MWM_Tour_Cultural_Guide_Part2.md` covers twelve sections: eight southern tour cities (Columbia SC, Atlanta GA, Montgomery AL, Birmingham AL, Mobile AL, Baton Rouge LA, New Orleans LA, and Houston TX) plus four satellite cities (Allentown PA, Abington/Willow Grove PA, Harrisburg PA, and Chicopee MA).

`MWM_Tour_Cultural_Guide_Part3_Expansion.md` covers thirty-six expansion cities spanning the Northeast, Southeast, Midwest, Southwest, and West Coast. Twenty-four of these cities are flagged in the document as already existing in the codebase — these require enhancement and deduplication, not fresh seeding.

### Expected extraction targets (minimum floor, not ceiling):

| Guide Document                     | Cities | Entities with Explicit Addresses | Total Named Entities |
|------------------------------------|--------|----------------------------------|----------------------|
| Part 1 (Tour — East Coast)         | 5      | 82                               | 242+                 |
| Part 2 (Tour — South + Satellites) | 12     | 189                              | 478+                 |
| Part 3 (Expansion)                 | 36     | 258                              | 597+                 |

|       |    |     |        |
|-------|----|-----|--------|
| Total | 53 | 529 | 1,317+ |
|-------|----|-----|--------|

The 1,317 figure is a conservative floor. Many businesses are embedded in prose paragraphs (e.g., "**Hakim's Bookstore** is a historic landmark located at 210 S 52nd St...") and will not be captured by a simple address-line scan. You must parse both structured and prose-format entries.

## Section 2: What to Seed — Entity Types

The following entity types must all be extracted and seeded. Every section of every guide document must be fully processed — cultural sites, business sections, farmers market sections, community organization sections, and content opportunity sections alike.

**Cultural Sites and Heritage Landmarks** include museums, historic homes, monuments, civil rights landmarks, and historic churches. These are typically presented in numbered sections with explicit `**Address:**` and `**Description:**` fields.

**Diaspora-Owned Businesses** include restaurants, cafes, bookstores, salons, markets, distilleries, galleries, and retail shops. In Parts 1 and 2, these appear in both prose paragraph format and summary tables. In Part 3, they appear exclusively in prose paragraphs. You must extract from both formats.

**Farmers Markets, Flea Markets, and Community Markets** appear in dedicated "Farmers Markets & Pop-Up Markets" subsections within each city's content opportunities section. Some markets have multiple weekly locations (e.g., the Crescent City Farmers Market in New Orleans has three separate locations on different days) — each location gets its own pin.

**HBCUs** appear throughout all three documents. At minimum, the following institutions are named and must be seeded: Tuskegee University, Howard University, Spelman College, Morehouse College, Clark Atlanta University, Dillard University, Fisk University, Tennessee State University, Texas Southern University, Southern University, Shaw University, Johnson C. Smith University, Virginia Union University, Benedict College, Allen University, North Carolina Central University, Saint Augustine's University, Norfolk State University, Morgan State University, Alabama State University, Miles College, Bishop State Community College, LeMoyne-Owen College, Jackson State University, Tougaloo College, Paul Quinn College, St. Philip's College, and Meharry Medical College.

**Heritage Districts and Historic Neighborhoods** include areas like the Waverly Historic District in Columbia SC, the Atlanta University Center, Orange Mound in Memphis, and similar named neighborhoods. These should be seeded as `heritage_district` pins using a

central coordinate or intersection. Do not skip these because they lack a single street address.

**Murals and Public Art** are mentioned throughout all three documents. Any named mural or public artwork (e.g., the Black Wall Street Mural in Columbia SC, the Octavius V. Catto Memorial in Philadelphia) must be seeded.

**Community Organizations** listed in the "Community Organizations Worth Connecting With" sections of each city — including chambers of commerce, cultural centers, and NAACP/Urban League chapters — should also be seeded as pins, using `pin_type`: `"cultural_site"` and `culturalCommunity: "Black-owned"` or the appropriate community tag.

## Section 3: Data Schema and Field Specifications

For each extracted entity, construct a database record with the following fields. Every field is required unless marked optional.

| Field                             | Type    | Rules                                                                                                                                 |
|-----------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------|
| <code>name</code>                 | String  | The extracted name of the entity, exactly as written in the guide.                                                                    |
| <code>description</code>          | String  | Use the exact description from the guide. This is the default text shown until an owner claims the listing.                           |
| <code>address</code>              | String  | See address resolution rules in Section 4.                                                                                            |
| <code>approximate_location</code> | Boolean | <code>true</code> if the address is a neighborhood name or district description; <code>false</code> if a street address was provided. |
| <code>city</code>                 | String  | Extracted from the city section header.                                                                                               |
| <code>state</code>                | String  | Two-letter state code extracted from the section header.                                                                              |
| <code>pin_type</code>             | Enum    | Must be one of the eight values defined in Section 5.                                                                                 |
| <code>culturalCommunity</code>    | String  | Diaspora ownership tag. See examples in Section 5.                                                                                    |

|                             |        |                                                                                                                                                                                               |
|-----------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>externalUrl</code>    | String | Optional. Include if a URL is provided in the guide.                                                                                                                                          |
| <code>visit_tip</code>      | String | Optional but required for churches, markets, barbershops, and cultural gathering spots. See Section 6 for the full Kinfolk voice specification.                                               |
| <code>listing_status</code> | Enum   | <code>"live_unclaimed"</code> for Philadelphia PA only. <code>"staged"</code> for all other cities.                                                                                           |
| <code>data_source</code>    | String | Must be exactly <code>"manus_tour_guide"</code> for every record created from these documents. This is how the founder distinguishes her curated data from your previous independent seeding. |

## Section 4: Address Resolution Rules

The guides use several different address formats, and each must be handled consistently.

When the guide provides a full street address (e.g., "701 Arch St, Philadelphia, PA 19106"), use it exactly as written and set `approximate_location: false`.

When the guide provides only a neighborhood name (e.g., "West Philadelphia" or "Midtown Houston"), use the neighborhood name as the address value and set `approximate_location: true`. Do not leave the address field blank.

When the guide describes a district by its boundaries or a famous street name (e.g., "Waverly Historic District, bounded by Harden, Gervais, Taylor Streets, and Millwood Ave"), use the most recognizable intersection or central point as the address (e.g., "Harden St & Gervais St, Columbia, SC") and set `approximate_location: true`.

When the guide provides an intersection rather than a building address (e.g., "6th and Market Streets, Philadelphia, PA" for the President's House), use the intersection exactly as written and set `approximate_location: false` — an intersection is a precise location.

When a business has no physical location (e.g., Sisterfriend Jewelry in Philadelphia, which operates "Online / By Appointment"), seed the record with the city and neighborhood as

the address, set `approximate_location: true` , and add a note in the description that this business operates online or by appointment.

When a farmers market has multiple weekly locations (e.g., Crescent City Farmers Market in New Orleans operates at three separate addresses on different days), create a separate pin for each location. Include the day and time in the description field.

## Section 5: Pin Types and Cultural Community Tags

Every pin must be assigned exactly one `pin_type` value. The following table defines each type and provides examples drawn directly from the guide documents.

| pin_type Value    | Applies To                                                     | Guide Examples                                                                                                                              |
|-------------------|----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| cultural_site     | Museums, historic sites, monuments, civil rights landmarks     | African American Museum in Philadelphia, National Civil Rights Museum at the Lorraine Motel, Schomburg Center for Research in Black Culture |
| heritage_landmark | Historic churches, cemeteries, historic buildings              | Mother Bethel A.M.E. Church, Historic Eden Cemetery, Historic Fair Hill, Zion Baptist Church                                                |
| business          | Restaurants, cafes, shops, salons, distilleries, galleries     | Hakim's Bookstore, Sylvia's Restaurant, Bunna Cafe, The Lit. Bar                                                                            |
| market            | Farmers markets, flea markets, cultural markets, night markets | Crescent City Farmers Market, African American Market at FDR Park, French Market New Orleans, Soda City Market                              |
| HBCU              | University campuses                                            | Howard University, Spelman College, Tuskegee University, Benedict College, Allen University                                                 |
| heritage_district | Historic neighborhoods, cultural corridors, named districts    | Waverly Historic District, Orange Mound, Atlanta University Center, Beale Street Historic District                                          |

|                     |                                                     |                                                                                                 |
|---------------------|-----------------------------------------------------|-------------------------------------------------------------------------------------------------|
| mural_or_public_art | Murals, sculptures, public monuments                | Black Wall Street Mural (Columbia SC), Octavius V. Catto Memorial, murals at Historic Fair Hill |
| park_or_outdoor     | Parks, gardens, waterfront areas, outdoor landmarks | Shirley Chisholm State Park, Fairmount Park (Belmont Mansion)                                   |

For the `culturalCommunity` field, use the following standardized tags based on what the guide specifies. Do not invent tags — use the closest match from this list: "Black-owned", "Ethiopian-owned", "Somali-owned", "West African-owned", "Ghanaian-owned", "Nigerian-owned", "Senegalese-owned", "Hispanic-owned", "Mexican-owned", "Colombian-owned", "Puerto Rican-owned", "Venezuelan-owned", "Trinidadian-owned", "Jamaican-owned", "Caribbean-owned", "Brazilian-owned", "Filipino-owned", "Vietnamese-owned", "Korean-owned", "Cambodian-owned", "Lebanese-owned", "Palestinian-owned", "Yemeni-owned", "Indigenous-owned", "Dominican-owned", "Haitian-owned".

For cultural sites, HBCUs, and heritage landmarks that are not businesses, use "Black cultural heritage" as the `culturalCommunity` value unless the guide specifies otherwise.

## Section 6: The Visit Tip Field — Kinfolk Voice Specification

The `visit_tip` field is one of the most important additions to the pin schema. It must feel like advice from a friend who grew up in the neighborhood — warm, specific, and culturally grounded. It should never read like a Yelp review or a generic tourism blurb.

**When to generate a `visit_tip`:** This field is required for all `heritage_landmark` pins (especially churches), all `market` pins, all `HBCU` pins, and any `business` pin that is a barbershop, beauty salon, soul food restaurant, community bookstore, or cultural gathering spot. It is optional but encouraged for `cultural_site` and `heritage_district` pins.

**Tone and voice:** The tip should be direct, warm, and specific. It should reference a time of day or day of the week when the cultural energy is highest. Sunday mornings hold special weight in Black culture — any historic Black church should acknowledge this. Saturday mornings are the heartbeat of markets and barbershops. Weekday mornings near HBCUs are when the student and creative community gathers.

### Reference examples by venue type:

A historic Black church should read something like: *"Sunday mornings are when this community comes alive — arrive early and you'll feel the spirit before the service starts."*

A farmers market or community market should read something like: *"Saturday mornings are the heartbeat — get there by 9am before the best produce is gone."*

A barbershop or beauty salon should read something like: *"Saturday mornings are community gathering time — the conversations are as good as the cuts."*

A soul food restaurant should read something like: *"The lunch rush (11:30am-1pm) is when you see the real community. Come at 2pm if you want to talk to the owner."*

A coffee shop near an HBCU should read something like: *"Best visited weekday mornings 8-10am when students and creatives gather before class."*

A historic district or mural should read something like: *"Walk it in the morning when the light hits the murals just right."*

An HBCU campus should read something like: *"Come during the school year and walk the yard — the energy of a historically Black campus on a weekday morning is something you have to feel."*

A civil rights museum or memorial should read something like: *"Give yourself more time than you think you need — this history will stop you in your tracks."*

**What to avoid:** Do not write tips that sound like operating hours ("Open Tuesday through Sunday"). Do not use generic tourism language ("A must-see for history buffs"). Do not reference specific prices. Keep each tip to one or two sentences.

## Section 7: Phased Seeding by City Status

The `listing_status` field determines whether a pin is immediately visible to users or held in a staged state for future city launches. The following table defines the correct status for every city group.

| City Group           | Cities                                                                                                       | <code>listing_status</code>   |
|----------------------|--------------------------------------------------------------------------------------------------------------|-------------------------------|
| Live                 | Philadelphia, PA                                                                                             | <code>"live_unclaimed"</code> |
| Tour Cities (Part 1) | Washington DC, Richmond VA, Raleigh/Durham NC, Charlotte NC                                                  | <code>"staged"</code>         |
| Tour Cities (Part 2) | Columbia SC, Atlanta GA, Montgomery AL, Birmingham AL, Mobile AL, Baton Rouge LA, New Orleans LA, Houston TX | <code>"staged"</code>         |
| Satellite Cities     | Allentown PA, Abington/Willow Grove PA, Harrisburg PA,                                                       | <code>"staged"</code>         |

|                                                        |                                                                                                                                                                                                                                                                       |                                                                     |
|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
|                                                        | Chicopee MA                                                                                                                                                                                                                                                           |                                                                     |
| <b>Expansion Cities (Part 3 — Net-New)</b>             | Newark NJ, Boston MA, Hartford CT, Orlando FL, Milwaukee WI, Minneapolis/St. Paul MN, San Antonio TX, Denver CO, Phoenix AZ, Las Vegas NV, Seattle WA, Portland OR                                                                                                    | "staged"                                                            |
| <b>Expansion Cities (Part 3 — Already in Codebase)</b> | NYC, Baltimore, Jacksonville, Miami, Savannah, Nashville, Memphis, Chicago, Detroit, Cleveland, St. Louis, Indianapolis, Dallas/Fort Worth, Los Angeles, Oakland/Bay Area, Kansas City, Tulsa, Jackson MS, Tampa, Charleston, Tuskegee, Columbus, Cincinnati, Norfolk | Enhancement mode — deduplicate first, then seed net-new as "staged" |

## Section 8: Deduplication and Cross-Referencing

The app currently has 151 cultural sites seeded independently. Before inserting any new record, you must cross-reference against these existing 151 sites. The deduplication logic must follow these exact rules.

If a site from the guide already exists in the database — matched by name and city — do not create a duplicate pin. Instead, check whether the guide's description is richer or more detailed than the existing one. If it is, update the existing record's `description` field. Additionally, update the existing record to add the `visit_tip` field and verify that `culturalCommunity` tags are correctly assigned. Finally, update the `data_source` field to add `"manus_tour_guide"` alongside the existing source tag.

The 24 Part 3 cities marked "ALREADY IN CODEBASE" in the guide document carry the highest duplicate risk. Treat all entities from these cities as potential duplicates first, and only create new pins for entities that do not already exist.

A known example: Mother Bethel A.M.E. Church in Philadelphia almost certainly exists in the current 151. Do not duplicate it. Do update it with the guide's richer description and add the appropriate Sunday morning `visit_tip`.

## Section 9: Per-City Seeding Targets

The following tables provide the minimum expected extraction counts per city, derived from a structural analysis of the guide documents. Your final counts should meet or exceed these numbers. If your extraction falls significantly short, you have missed prose-embedded entities and must re-parse.

### Part 1 — East Coast Tour Cities:

| City               | Min. Addressed Entries | Min. Total Named Entities |
|--------------------|------------------------|---------------------------|
| Philadelphia, PA   | 10                     | 55                        |
| Washington, DC     | 12                     | 55                        |
| Richmond, VA       | 10                     | 37                        |
| Raleigh/Durham, NC | 25                     | 54                        |
| Charlotte, NC      | 25                     | 41                        |

### Part 2 — Southern Tour Cities and Satellites:

| City                                  | Min. Addressed Entries | Min. Total Named Entities |
|---------------------------------------|------------------------|---------------------------|
| Columbia, SC                          | 12                     | 48                        |
| Atlanta, GA                           | 32                     | 46                        |
| Montgomery, AL                        | 12                     | 57                        |

| Cincinnati, OH  | Enhance | 8 | 18 |
| Norfolk, VA     | Enhance | 6 | 16 |

## Section 10: Worked Examples

The following are three complete example records showing exactly how the schema should be populated for different entity types. These are drawn directly from the guide documents.

### Example 1 — Cultural Site (Philadelphia, live city):

JSON

```
{
  "name": "The African American Museum in Philadelphia (AAMP)",
  "description": "Founded in 1976, AAMP is the first major museum of Black history in Philadelphia.",
  "address": "701 Arch St, Philadelphia, PA 19106",
  "approximate_location": false,
  "city": "Philadelphia",
  "state": "PA",
  "pin_type": "cultural_site",
  "culturalCommunity": "Black cultural heritage",
  "externalUrl": null,
  "visit_tip": "Give yourself more time than you think you need – this history is worth the wait.",
  "listing_status": "live_unclaimed",
}
```

```
"data_source": "manus_tour_guide"
}
```

### Example 2 — Heritage Landmark / Church (Columbia SC, staged city):

JSON

```
{
  "name": "Zion Baptist Church",
  "description": "A historic church where Dr. Matilda Evans opened a free clinic",
  "address": "801 Washington St, Columbia, SC 29201",
  "approximate_location": false,
  "city": "Columbia",
  "state": "SC",
  "pin_type": "heritage_landmark",
  "culturalCommunity": "Black cultural heritage",
  "externalUrl": null,
  "visit_tip": "Sunday mornings are when this community comes alive – arrive early",
  "listing_status": "staged",
  "data_source": "manus_tour_guide"
}
```

### Example 3 — Business (New Orleans, staged city):

JSON

```
{
  "name": "Dooky Chase's Restaurant",
  "description": "A legendary Creole restaurant and cultural institution in New Orleans",
  "address": "2301 Orleans Ave, New Orleans, LA 70119",
  "approximate_location": false,
  "city": "New Orleans",
  "state": "LA",
  "pin_type": "business",
  "culturalCommunity": "Black-owned",
  "externalUrl": null,
  "visit_tip": "The Sunday jazz brunch is the full experience – come hungry and thirsty",
  "listing_status": "staged",
  "data_source": "manus_tour_guide"
}
```

### Example 4 — Farmers Market (New Orleans, staged city):

JSON

```
{
  "name": "Crescent City Farmers Market – Uptown",
  "description": "A vibrant outdoor market featuring local produce, artisanal goods, and live music",
  "address": "1001 Poydras St, New Orleans, LA 70112",
  "approximate_location": false,
  "city": "New Orleans",
  "state": "LA",
  "pin_type": "business",
  "culturalCommunity": "Black-owned",
  "externalUrl": null,
  "visit_tip": "The market is open every Saturday from 9 AM to 4 PM. Don't miss the live jazz performances!",
  "listing_status": "staged",
  "data_source": "manus_tour_guide"
}
```

```

    "description": "A beloved weekly farmers market held at The Batture in Uptown",
    "address": "25 Walnut Street, New Orleans, LA 70118",
    "approximate_location": false,
    "city": "New Orleans",
    "state": "LA",
    "pin_type": "market",
    "culturalCommunity": "Black cultural heritage",
    "externalUrl": null,
    "visit_tip": "Tuesday mornings are the heartbeat – get there early before the",
    "listing_status": "staged",
    "data_source": "manus_tour_guide"
  }

```

### Example 5 — HBCU (Columbia SC, staged city):

JSON

```

{
  "name": "Benedict College",
  "description": "Founded in 1870 originally to train Black teachers and minist",
  "address": "1600 Harden St, Columbia, SC 29204",
  "approximate_location": false,
  "city": "Columbia",
  "state": "SC",
  "pin_type": "HBCU",
  "culturalCommunity": "Black cultural heritage",
  "externalUrl": null,
  "visit_tip": "Come during the school year and walk the yard – the energy of a",
  "listing_status": "staged",
  "data_source": "manus_tour_guide"
}

```

## Section 11: Verification Report Requirements

After executing the seeding script, you must output a verification report for the founder before closing the task. This report is not optional.

The report must include the total count of new pins added, broken down by city. The overall total should meet or exceed 1,317 entities. It must include the exact number of records that were identified as duplicates of the existing 151 pins, and whether those records were skipped or merged. It must include the count of pins flagged with `approximate_location: true`. To verify the Kinfolk voice is being applied correctly, include a random sample of five generated `visit_tip` values from different cities and venue types. Finally, provide a full JSON dump of five diverse pins — one HBCU, one church, one

restaurant, one market, and one mural — from five different cities, showing every field correctly populated.

If your total extraction count falls more than 15% below the per-city targets in Section 9, flag the discrepancy explicitly and identify which sections of the guide documents may have been missed.

---

## Section 12: Special Cases and Edge Cases

**Sisterfriend Jewelry (Philadelphia):** This business operates online and by appointment only. Seed it with `"address": "West Philadelphia, PA"` , `"approximate_location": true` , and add a note in the description that the business operates online and by appointment.

**The Crescent City Farmers Market (New Orleans):** This market operates at three separate locations on three separate days. Create three distinct pins — one for the Uptown location (Tuesdays), one for the Mid-City location (Thursdays), and one for the City Park location (Sundays).

**The Atlanta University Center:** Seed this as a `heritage_district` pin for the overall consortium. Then seed individual `HBCU` pins for Morehouse College, Spelman College, Clark Atlanta University, and Morehouse School of Medicine as separate records.

**The President's House (Philadelphia):** The address "6th and Market Streets" is an intersection, not a street address. This is a precise location — set `approximate_location: false` .

**Historic Eden Cemetery (Collingdale, PA):** This site is listed under the Philadelphia section but is located in suburban Collingdale, PA. Seed it with the Collingdale address as provided, and set `city: "Collingdale"` and `state: "PA"` . Do not assign it to the Philadelphia city record.

**Part 3 Cultural Phrases Taxonomy (final section of Part 3):** The final section of `MWM_Tour_Cultural_Guide_Part3_Expansion.md` is a "Cultural Phrases & Community Language Taxonomy." This section contains no seedable pins. Do not attempt to extract entities from it.

**Community organizations without storefronts:** Organizations like the African-American Chamber of Commerce of PA, NJ, and DE, or the Urban League chapters, should be seeded as `cultural_site` pins using their listed address. If no address is provided, use the city name as the address and set `approximate_location: true` .
